

# Data Collector

## Usage

First register the service Populate a DBParcelable object and send as a Parcelable with an intent

## Result

Adds a row to a step table with timings for a particular step.

## Example

```
<service android:name=".service.DBHandlerService"
android:exported="true"/>
```

```
Intent mServiceIntent = new Intent(getActivity(),
DBHandlerService.class);
mServiceIntent.putExtra(DBHandlerService.PARCELABLE_NAME,
dbParcelable); // Starts the IntentService startService(mServiceIntent);
```
